Slowly growing summer variety with round leaves and dark green colour.

**Montego**

● Pfs: 1-9, 11-16

Even slower growing variety with almost round, dark green and slightly waved thicker leaves and a high yield.

**Babyleaf**

**Parsnip**

Gemüsesamen

Vegetable seed

## ad terram seed treatment

For the past two years, we have only used organic colour and coating from ad terram in our treated seeds. By using these FIBL approved agents, we avoid introducing polymers into the environment.

The seed is not enclosed in an artificial shell, the water absorption is faster from the outside. The casserole is more stable.

### ad terram biostimuland optimum

We think that with this FIBL-approved biostimulant, we will be able to significantly improve the casserole and germination of your seeds in the future.

Since chemical treatment agents will be reduced or even banned in the near future, we think we can offer you an ecological alternative.

Optimum allows the seed, among other things, to form larger vacuoles in the cell and thus increases their defenses.

We are happy to explain this to you in more detail or offer you seeds with optimum.

**Test it!**
